ENESEAL HR Used To Lower Temperature Inside Airport Jet Bridge The operators of an international airport located in India were in need of a solution to uncomfortably high temperatures inside their jet bridges. Since there was no heat refractive qualities against the sun on the jet bridge roof,

2 coats of ENESEAL HR were applied to provide this protection. They found a decrease of 8°-10°C. The airport engineers were so pleased with the results 78 more jet bridges were awarded to the local ENECON Distributor.
