

One of the Largest U.S. Mass Transit Operators Uses ENESEAL[®] to Stop Leaks into 30 Year Old Train Cars

Client: One of the largest mass transit operators in the U.S.

Problem: Existing methods to stop water leaking into the train from roof seams was not working. A complete overhaul of the roofs was being considered.

Solution: The surface was prepared by high pressure washing and the seams were sealed with a silicone caulk. ENESEAL CR was applied as a surface primer followed by two coats of ENESEAL HR.

Savings: Compared to a complete roof overhaul costing \$20,000 per car, the ENECON solution cost just \$2,500 (including labor & materials) per car. The transit operator was so pleased with the results, 330 cars were scheduled to be repaired. Over 100 have been successfully repaired to-date.
