

CHEMCLAD SC - Plus Some Imagineering - Solve Serious Safety Concerns at Major Nuclear Power Station

When an old, badly deteriorated staircase constructed from concrete and wood needed reclamation, the engineers at this nuclear plant turned to ENECON for help. Working with the plant

engineers, Team ENECON came up with a cost effective solution...

Construct a new staircase out of modular aluminum plates and then protect

these plates with a **CHEMCLAD SC** non-skid system.

The staircase was rebuilt in record time and at a fraction of the cost associated with conventional

replacement procedures.

This staircase has now been providing outstanding performance to the plant for quite a few years.
