

## JAPAN'S TOEI GIKO CONTINUES TO GROW WITH THE FLOW

Ed Krensel, (center) with Kazuo Azuma, (right) President of TOEI GIKO - surveying the market in Japan.

The glass of this live fish "waterpool" required cleaning once a month. After 6 months with ENEFLOW Power Cells, the glass and the water remain crystal clear, and the fish are healthier and living longer.

Mineral scale problems have been eliminated with the installation of **10 pairs of ENEFLOW 5000 Power Cells** on this 20 inch diameter cooling water pipe.

The muddy waste water carried by this pipe meant pressure cleaning 2 or 3 times per year. The system has been cleaned **only once in 2 years** since installing Power Cells.

ENEFLOW 5000's (3 pairs) installed on this cooling water pipe have prevented any scaling problems.
