

Italian Military Shipyard Selects CeramAlloy & CHEMCLAD SC to Repair & Protect These Huge Pump Components

These extraordinary photos, supplied by ENECON Italia, speak for themselves. This \$131,000 project took the

ENECON Italia Engineering Team about 30 days to complete.

After grit blasting, CeramAlloy CP+AC was

used to repair any stress cracks and erosion/corrosion pitting.

Two coats of CeramAlloy CL+AC were then applied

to all internal surfaces followed by two coats of CHEMCLAD SC to protect the pump exterior.
